Website audit and rebuild

What was holding back i1cleaner.com, and how the new site fixes it: a page-by-page comparison of the current Wix site and the proposed Next.js rebuild.

CURRENT i1cleaner.com today

PROPOSED The rebuilt homepage

■ At a glance

The short version

Every page, section and piece of copy on the current site is carried over. The rebuild fixes the mistakes below, makes each page faster and clearer, and adds three things the current site cannot do: let customers pick their own cleaner, show real before-and-after results, and keep old Google links working.

~~1.09 MB~~ 125 KB	~~68~~ 31	~~4/15~~ All	~~0~~ 26
Largest page, HTML only (was 650 KB–1.09 MB)	Script tags on the homepage	Pages with a proper main heading	Cleaners customers can choose and book directly

What was found

	AREA	MAIN PROBLEMS ON THE CURRENT SITE	FINDINGS
1	**Content**	Wrong city on the Putrajaya page, a leftover “copy-of” page, copy-paste errors in the service-area list, contradicting payment and email details, typos.	10
2	**Structure**	Inconsistent URLs, 11 pages with no main heading, dead-end service pages, no way to choose a cleaner.	6
3	**Search (SEO)**	Keyword-stuffed titles, duplicated titles, broken business data for Google, keyword-stuffed image descriptions.	7
4	**Design & speed**	Heavy pages, off-brand clashing colours, no proof of results, weak keyboard accessibility.	6

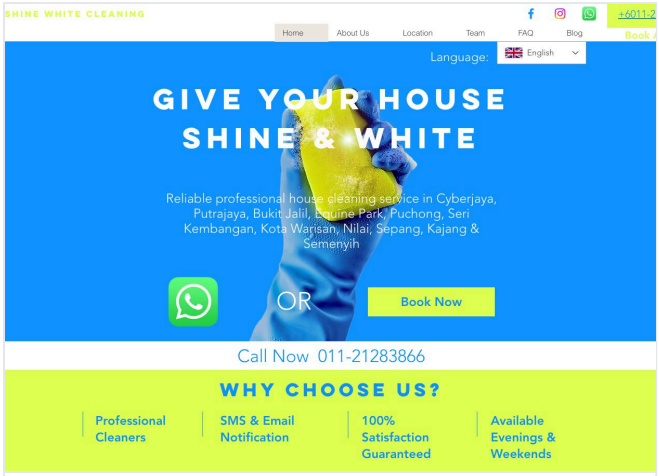

What was added

	FEATURE	WHAT IT DOES
+	**Cleaners page**	All 26 cleaners from the Setmore account, each linking straight to their own booking page.
+	**Before/after swipe**	Move across a photo to wipe it from dirty to clean. Works with mouse, finger and keyboard.
+	**Number counter**	Key figures count up as the visitor scrolls to them.
+	**Old link redirects**	All nine old service and location addresses forward to their new page, so Google rankings carry over.
+	**WhatsApp everywhere**	A WhatsApp button on every page, and a job application form that sends straight to WhatsApp.

Side by side

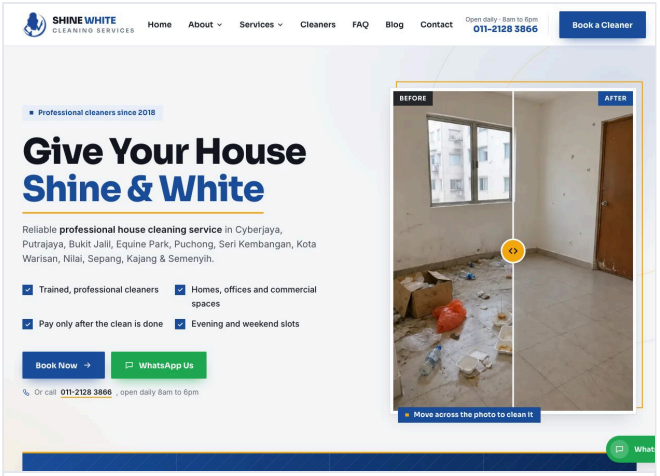

What visitors see

01 First impression

CURRENT

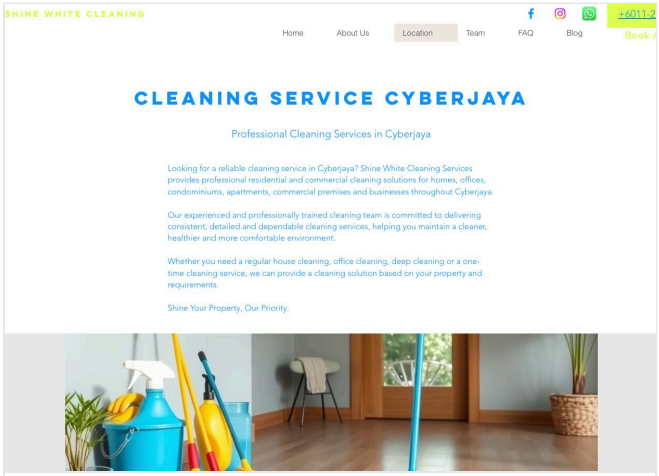

Neon blue and lime blocks, a headline typed as “HoUSE”, small thin text, and two competing buttons with an “OR” between them. Nothing shows what a clean actually looks like.

PROPOSED

One palette taken from the logo, a clear headline, four reasons to book, and a before/after photo the visitor can wipe clean right in the hero.

02 The Putrajaya page talks about Cyberjaya

CURRENT

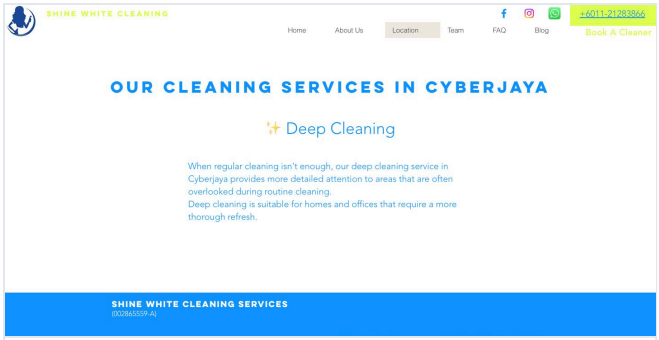

At `/putrajaya` the heading reads “Cleaning Service Cyberjaya” and every paragraph says Cyberjaya. The page was copied and never edited.

PROPOSED

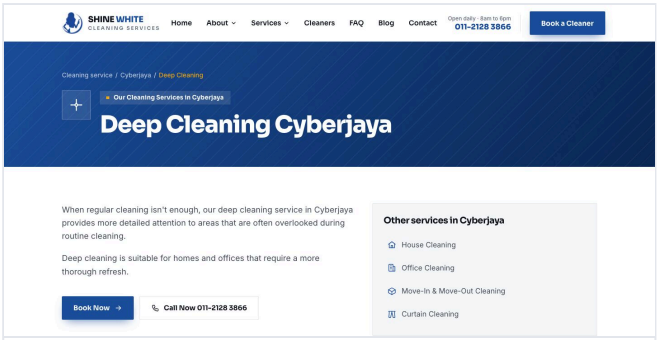

Location pages come from one template, so the place name is always right. Putrajaya now also has all five service pages, not just House Cleaning.

03 Service pages are dead ends

CURRENT

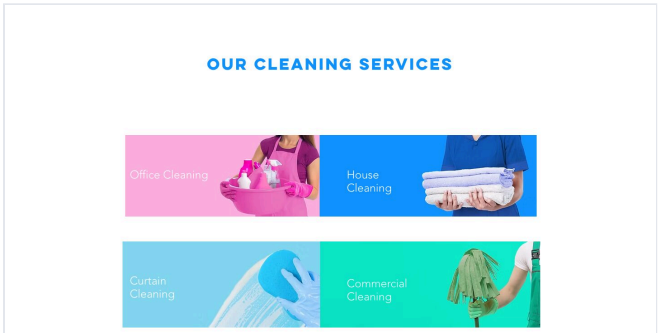

One short paragraph in thin pale text, then straight into the footer. No list of what is included, no link to related services.

PROPOSED

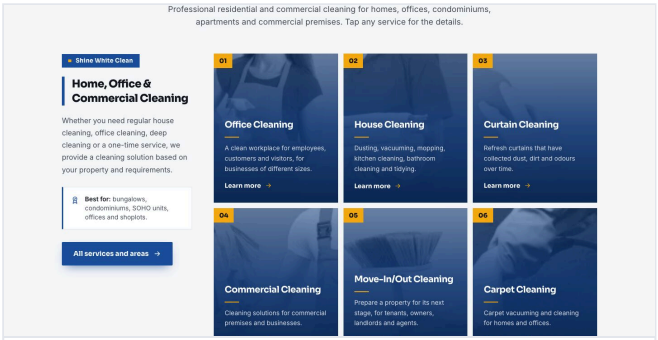

A breadcrumb, a clear heading, the included tasks, links to the other services in that area, booking and call buttons, and the before/after photos.

04 Service tiles

CURRENT

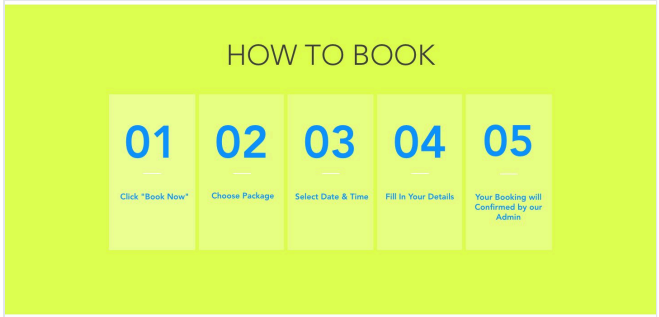

Pink, lime, cyan and red stock-photo tiles that clash with each other and with the blue logo. The labels are hard to read on the photos.

PROPOSED

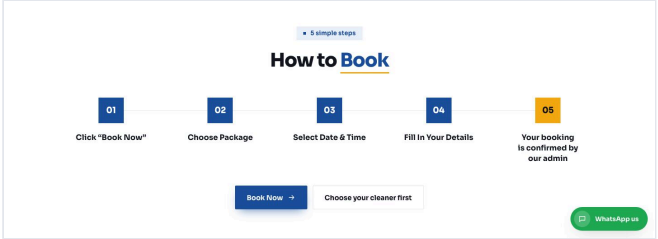

Six matching photo cards in the brand blue, each with a short description. Hovering a card brings its photo back to full colour.

05 How to book

CURRENT

Five boxes on a bright lime background, with tiny step text and the grammar slip “Your Booking will Confirmed”.

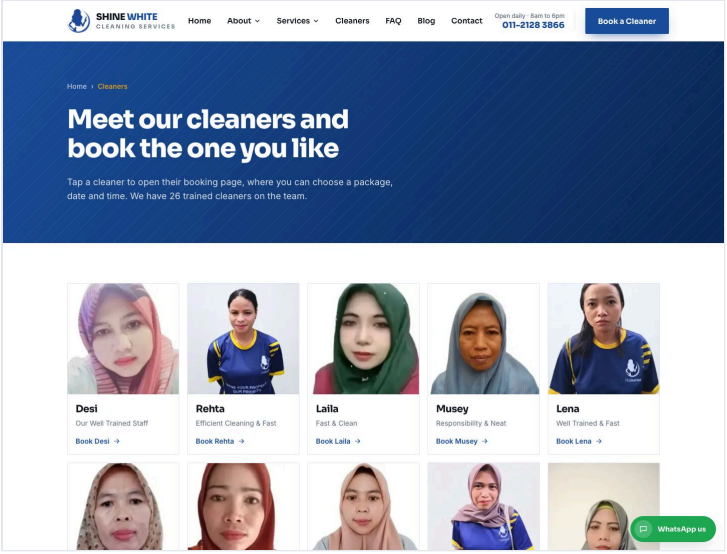

PROPOSED

A simple five-step timeline ending in a gold “confirmed” step, with Book Now and Choose Your Cleaner right underneath.

New on the site

Three things the current site cannot do

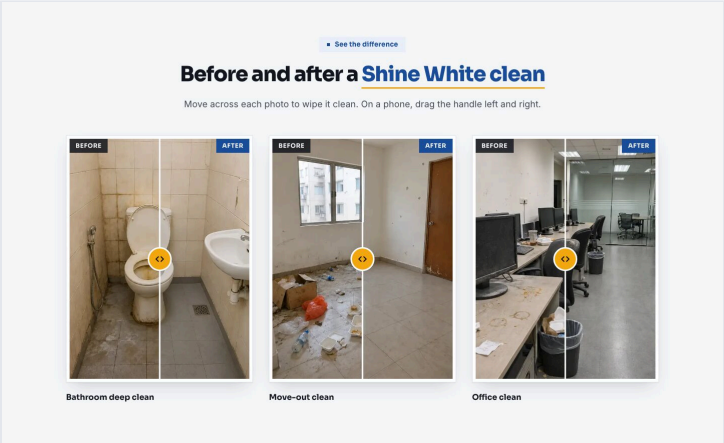

NEW PAGE

Choose your own cleaner

The Team page used to say “Cleaners” with nothing under it. The new `/cleaners` page shows all 26 cleaners from the Setmore account with photo, name and tagline.

Tapping a cleaner opens their own Setmore booking page. For example, Desi opens `shinewhite.setmore.com/team/cyfI0H9W…`. Every “Book a Cleaner” button on the site now leads here.

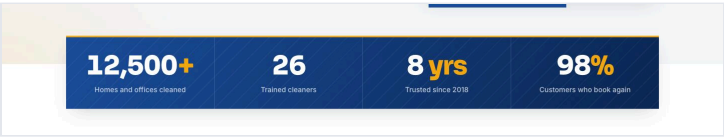

NEW SECTION

Before and after, in their hands

The three before/after photos were split into separate images. Moving across a photo wipes it from dirty to clean.

- Mouse: the divider follows the pointer.
- Phone: drag the gold handle.
- Keyboard: arrow keys move it.

It appears on the homepage, the services overview and every service page. The homepage version plays one sweep on load to show it can be moved.

NEW SECTION

Animated number counter

The figures count up from zero when the visitor scrolls to them.

Placeholder figures. “26 trained cleaners” and “8 years” are real. “12,500+ homes and offices cleaned” and “98% book again” are examples for this proposal and must be replaced with your real numbers.

Full list

Every mistake and its fix

1 · Content

	MISTAKE ON THE CURRENT SITE	FIX
1.1	Homepage headline typed as “Give Your HoUSE Shine & WHITE”.	“Give Your House Shine & White”.
1.2	`/putrajaya` is headed “Cleaning Service CYBERJAYA” and talks about Cyberjaya.	Location pages come from one template, so the place name is always right.
1.3	A leftover duplicate page is live at `/copy-of-house-cleaning-service-cyberjaya`.	Removed. The address forwards to the Cyberjaya page.
1.4	Service-area list has copy-paste errors: Nilai lists Puchong services, entries repeat, 16 Sierra has no Deep Cleaning.	Generated from one list of areas and one list of services, so every area shows the same five services once.
1.5	FAQ says “We only accept cash”; the policy on the same page says “cash/bank transfer”.	FAQ now says cash or bank transfer. *To confirm.*
1.6	Footer shows `info@i1cleaner.com` but the link opens `shinewhite88@outlook.com`.	One address everywhere: `info@i1cleaner.com`. *To confirm.*
1.7	Typos: “Your Booking will Confirmed”, “Whatapps Us Now!!!”, “Customise d House Cleaning Package”, “we are happily help you”, “Can i request...”.	Corrected without changing the meaning.
1.8	Team blurbs inconsistent; every card has a “Read More” button that leads nowhere useful.	Blurbs tidied; dead buttons removed.
1.9	Footer still links to Google+, which shut down in 2019.	Removed. Facebook, Instagram and Yelp kept.
1.10	Three different Facebook addresses used across the page.	One: `facebook.com/i1cleaner`.

2 · Structure and navigation

	MISTAKE ON THE CURRENT SITE	FIX
2.1	Hard-to-read, inconsistent URLs such as `/move-inmove-outcleaningcyberjaya`; two different pages called “cleaning service cyberjaya”.	One pattern: `/cleaning-service/<area>/<service>`.
2.2	Putrajaya only has a House Cleaning page.	Cyberjaya and Putrajaya both have all five service pages.
2.3	11 of 15 pages have no main heading; Contact’s is “HEADQUARTER”.	Every page has one clear main heading.
2.4	No way to see or choose a cleaner.	New Cleaners page with direct booking links.
2.5	Service pages are one paragraph and a button.	Included tasks, related services, booking options and before/after photos on each.
2.6	Phone number and booking button easy to lose on a phone.	Sticky header with Book a Cleaner, tap-to-call, and a WhatsApp button on every page.

3 · Search (SEO)

	MISTAKE ON THE CURRENT SITE	FIX
3.1	Titles are keyword lists, e.g. Contact: “Contact Us | Shine White Cleaning | Malaysia | 16 sierra | presint | precint”.	Clear titles: “Contact Us | Shine White Cleaning Services”.
3.2	Curtain Cleaning page titled “Cleaning Service Cyberjaya”, the same as two other pages.	A unique title per page, e.g. “Curtain Cleaning Cyberjaya”.
3.3	Team description is “Join us now.”; the Blog description is three drafts pasted together.	One written description per page.
3.4	Homepage has three overlapping blocks of business data for Google, one pointing to images that do not exist. Other pages have none.	One correct business block on every page (address, phone, hours, areas), plus FAQ data on the FAQ page.
3.5	Image descriptions stuffed with keywords; five client logos all called “customer cleaning”; 3–7 images per page with none.	Every image has a plain description; logos use the client’s name.
3.6	Uses the `keywords` tag, which Google ignores.	Dropped.
3.7	No plan for keeping old links working after a rebuild.	All nine old addresses permanently forward to their new page. Sitemap and robots file generated.

4 · Design, speed and accessibility

	MISTAKE ON THE CURRENT SITE	FIX
4.1	Each page sends 650 KB–1.09 MB of HTML and 65+ scripts before any image loads.	Pages are pre-built: 42–125 KB of HTML. Images served as WebP at the size each screen needs.
4.2	Clashing pink, lime and red tiles that have nothing to do with the brand.	One palette from the logo: brand blue with a gold accent. Matching photo cards.
4.3	Nothing shows what a clean looks like.	Before/after swipe section with real photos.
4.4	FAQ is a script-heavy widget; the FAQ page is the heaviest at 1.09 MB.	Simple expand/collapse that works without JavaScript.
4.5	Weak keyboard focus styles.	Visible focus ring, “Skip to content” link, large tap targets, reduced-motion support.
4.6	Booking links mix `http://` and `https://`.	All `https://`.

How it was done

From audit to new site

01 **Audit every page**
Downloaded all 15 pages of the current site and pulled out every heading, paragraph, link and image.

02 **One home for all the words**
All copy lives in one file, so text is edited once and pages cannot drift apart again.

03 **Rebuild on Next.js**
Each page is pre-built for speed. Location and service pages share one template.

04 **Reuse the brand**
The existing logo and client logos are kept; every image is resized and converted to WebP.

05 **Test on desktop and phone**
Checked in a browser at both sizes: no errors, no sideways scrolling, slider, cleaner links and old-address forwarding all working.

Still to do before launch

- **Counter figures:** replace the two example numbers with real ones.
- **Confirm details:** payment methods (cash or bank transfer) and which email inbox to show.
- **Malay and Chinese pages** (`/ms` , `/zh`) are not rebuilt yet.
- **Blog articles:** the 20 latest posts are listed but still open on the current site; their full text needs moving across.
- **Privacy Statement** from the old FAQ page needs its text supplied.
- **Hosting and domain:** the new site is ready to deploy but not live yet.

Shine Your Property, Our Priority.

The same business and content, presented so visitors trust it in seconds and can book the cleaner they want in two taps.
